Your child tested positive for COVID-19 (Coronavirus Disease 2019), a mild to severe respiratory illness with symptoms like a fever, cough and shortness of breath. Your child’s medical team has determined that your child is ready to go home from the hospital. This sheet describes important steps you should take at home.

What symptoms should I watch for at home?

- **Monitor your child’s symptoms**, including temperature/fever, cough, sore throat and shortness of breath or breathing problems.
  - If these symptoms get worse, call your child’s pediatrician. If there is an emergency, call 911 or your local emergency services number.
- **Let your child’s primary health provider know** your child has been discharged from Boston Children’s and has tested positive for COVID-19.

How can I help my child feel better at home?

- **Have your child rest**, eat healthy food and drink plenty of water.
- **Use fever-reducing medications** (as directed on the label or by your pediatrician), as needed if your child has a fever.
- **Take your child’s temperature by mouth** with a digital thermometer at least twice a day, at least 4 hours after giving medicine. Call your pediatrician if it’s over 100.4°F/38°C.

stay at home and away from others until isolation is no longer needed

- **Self-isolate**: Your child should stay home and away from others to lower the chance of spreading the illness. All household members should also stay home and self-isolate for 14 days after your child meets criteria for stopping home isolation.
- **Keep your child in 1 room of the house**: Your child should stay in 1 room or bed at least 6 feet (2 meters) away from other people and pets.
- **Use a delivery or pick-up service for groceries**, or ask friends or family members to drop off groceries and supplies. Have them leave them outside to avoid direct contact.
- **Avoid visitors and public places**: We do not recommend going to activities or gatherings outside your home, like school, church/mosques, grocery stores or restaurants. We do not recommend playdates or visitors.
- **If caregivers must come into your home for your child’s care**, let them know that your child has COVID-19. Caregivers should wear personal protective equipment, like gloves, eye protection and face masks.

When can we stop home isolation?

In general, people with COVID-19 can leave home when these 3 things have happened:

- They have had no fever for at least 72 hours (that’s 3 full days of no fever without the use of medicine that reduces fevers)
  - and
- Other symptoms have improved, such as cough or shortness of breath
  - and
- At least 10 days have passed since symptoms first appeared

Wear personal protective equipment and practice good hygiene

- **Choose 1 healthy family member to care for your child**. We know that isn’t always possible.
- **Have your child wear a face mask or cloth face covering** that covers their nose and mouth when they are around people, including you. If they can’t wear a face mask, you should wear one while in the same room with them.
- Everyone in the house should **wash their hands often with soap and water** for at least 20 seconds, especially after contact with your child. Natural soap is OK to use. You can also use an alcohol-based hand sanitizer that has 60-95% alcohol to clean your hands if soap and water aren’t available. You should wash your hands with soap and water if they are visibly dirty.
- Everyone in the house should **avoid touching their eyes, nose or mouth** unless they have just cleaned their hands.

How can I reduce germs in my home?

- If possible, **have your child use a separate bathroom from other members of your household**. The bathroom should be cleaned frequently and the toilet lid closed when flushing to prevent the spread of germs.
- **Clean commonly touched objects** including door handles, toilets and faucets, and electronic devices (phones, computers). Use a regular household cleaner or make your own disinfectant by mixing 1 part bleach to 9 parts water.
- **When cleaning, wear a medical facemask and disposable gloves if possible**. The CDC says that a bandana or scarf or other mask can offer limited protection if you do not have a medical facemask. After cleaning:
  - Remove gloves and throw away.
  - Wash your hands right away with soap and water or use an alcohol-based sanitizer.
  - Remove facemask and throw it away.
  - Wash your hands again with soap and water or use an alcohol-based sanitizer.
- **Do not share household items with anyone with suspected or confirmed COVID-19**. All used household items, such as bedding and towels, should be cleaned thoroughly after use. Sick people should use their own tube of toothpaste and soap.
- **Open windows and doors**, as weather allows, to keep air moving through your home.
Can I breastfeed my child?

- If your child is an infant and you are breastfeeding, you can still breastfeed your baby.
- Be sure to wash your hands and your chest area thoroughly with soap and warm water before and after you touch your baby.

What are some resources for my family?

Please note: This list is not all-inclusive and resources may change.

Massachusetts-based resources

**Massachusetts 211**

Mass 2-1-1 is an easy to remember telephone number that connects you to information about critical health and human services available in the community. It’s available 24 hours a day, 7 days a week.

If you are unable to reach 2-1-1, you can call 1-877-211-MASS (6277). Hearing impaired callers can call 508-370-4890 TTY.

**Food resources**

**FoodSource Hotline**

To find food resources in your community, call 1-800-645-8333 TTY 1-800-377-1292

Monday - Friday 8 a.m. - 7 p.m. and Saturday 10 a.m. - 2 p.m.
